

AI Prompt Library for Real Estate Agents

Course: AI for Real Estate Sales: From Confusion to Daily Use

Recommended use: Copy a prompt, replace the placeholders, review the output, verify facts, and edit before sending.

Prompt Formula

Use this structure when you need better output:

Role: Who should AI help as?

Task: What should it create or improve?

Context: What facts, notes, lead source, property details, or client situation matter?

Audience: Who will receive it?

Tone: How should it sound?

Constraints: What should it avoid?

Format: Text, email, voicemail, checklist, table, agenda, script, etc.

Goal: What should the message or workflow accomplish?

Base prompt:

You are helping me as a real estate professional. I need to create [TASK] for [AUDIENCE]. Here is the context: [CONTEXT]. The tone should be [TONE]. Avoid [CONSTRAINTS]. Format the result as [FORMAT]. The goal is [GOAL]. Do not invent missing facts. Flag anything I should verify before using this.

1. Lead Follow-Up

Create a first-response message for a new [LEAD SOURCE] lead. Context: [LEAD NOTES]. They asked about [PROPERTY OR AREA]. Write one text message, one short email, and one voicemail opener. Keep the tone warm, concise, and appointment-oriented. Do not pressure them. Ask one simple next-step question.

Review these lead notes and suggest the best next message: [CRM NOTES]. Identify the likely intent level, the missing information I should ask for, and one text message that gives the lead a reason to respond.

2. Buyer Consultation Prep

Help me prepare for a buyer consultation. Buyer context: [BUYER GOAL], [PRICE RANGE], [AREAS], [TIMELINE], [FINANCING STATUS], [CONCERNS]. Create a short meeting agenda, five discovery questions, likely objections, and a follow-up message I can send after the appointment.

3. Seller Consultation Prep

Help me prepare for a listing consultation. Seller context: [SELLER MOTIVATION], [TIMELINE], [PROPERTY DETAILS], [KNOWN UPDATES], [PRICING EXPECTATION], [CONCERNS]. Create a meeting agenda, discovery questions, talking points, and a follow-up email. Do not make pricing claims without verified comparable sales.

4. Listing Description Drafts

Draft a listing description using only these verified facts: [PROPERTY FACT BLOCK]. Tone: [TONE]. Audience: [TARGET BUYER TYPE WITHOUT PROTECTED-CLASS LANGUAGE]. Do not invent features, school claims, neighborhood claims, square footage, views, upgrades, or amenities. Flag missing details I should verify.

5. Social Media Post Drafts

Turn this verified property fact block into three social media captions: [PROPERTY FACT BLOCK]. Create one professional caption, one short casual caption, and one open-house caption. Avoid Fair Housing risk, unsupported claims, and exaggerated language.

6. Email Follow-Up

Rewrite this email so it sounds like a helpful real estate agent, not an automated drip: [DRAFT EMAIL]. Keep it under [WORD COUNT] words, make it specific to [CLIENT OR LEAD CONTEXT], and end with one clear next-step question.

7. Text Message Follow-Up

Create a short text message for [CLIENT NAME OR LEAD TYPE] based on this context: [CONTEXT]. Keep it natural, under 320 characters, and focused on one next step. Avoid sounding pushy or generic.

8. Open House Follow-Up

Create follow-up messages for an open house visitor. Visitor notes: [NOTES]. Write a same-day text, a next-day email, and a short phone opener. The goal is to learn whether they are actively searching and whether a buyer consultation or showing makes sense.

9. Past Client Reactivation

Write a warm reactivation message to a past client. Context: [PAST CLIENT CONTEXT], [LAST CONTACT], [LOCAL MARKET HOOK]. Keep it personal, useful, and low-pressure. Include one simple question that invites a reply.

10. Sphere Nurturing

Create a monthly sphere email based on this topic: [TOPIC]. Audience: homeowners and local contacts. Tone: practical and conversational. Include one useful insight, one local prompt for conversation, and one soft offer to help. Avoid market predictions and unsupported claims.

11. Objection Handling

Role-play as [BUYER OR SELLER] who says: "[OBJECTION]." Push back realistically. After each response I write, tell me what sounded clear, what sounded defensive, and how I can improve. Keep the advice compliant and avoid legal, financial, or predictive claims.

12. Daily Task Planning

Help me prioritize my real estate work today. Here are my tasks: [TASK LIST]. Here are my active clients and leads: [SUMMARY]. Group the day into morning, midday, afternoon, and end-of-day. Identify three

high-value follow-up actions and one task I can simplify with AI.

13. CRM Cleanup

Turn these rough CRM notes into a clean summary and next step: [NOTES]. Format as: client goal, timeline, important context, last interaction, next best action, message draft, and facts to verify. Remove sensitive details that should not be shared externally.

14. Content Repurposing

Repurpose this market update or client education note into three formats: [SOURCE CONTENT]. Create a short email, a social caption, and a 45-second video outline. Keep the facts unchanged and flag any claims that need verification.

15. Market Update Explanation

Explain this market information in plain language for [BUYER/SELLER/PAST CLIENT]: [VERIFIED MARKET DATA]. Avoid predictions, legal advice, financial advice, and exaggerated claims. Include what this may mean generally and what should be reviewed with a qualified professional if needed.

16. Compliance Review Checklist

Review this real estate message for risk before I use it: [DRAFT]. Check for unsupported facts, Fair Housing concerns, discriminatory language or targeting, confidential information, MLS or advertising issues, pricing or market overclaims, financial/legal advice, and tone problems. Return a table with risk, why it matters, and safer wording.

Quick Review Before Use

- Did I remove private or confidential information before prompting?
- Did I provide verified facts instead of asking AI to guess?
- Did I review the result for accuracy and tone?
- Did I check Fair Housing, MLS, advertising, brokerage policy, and opt-out requirements where relevant?
- Does the final version sound like me on a good day?
