

APPROVED REALTOR® EDUCATION COURSE

AI for Real Estate Sales

From Confusion to Daily Use

LIVE WORKSHOP

Presented by Ian Burton Price | GoHouse.ai

For MIAMI REALTORS® + RWorld members

Practical AI Training for Real Estate Professionals

Practical workshop focus

Client messages
Lead follow-up
Listing prep
Appointment prep

Today is about practical AI workflows you can actually use

- Ian Burton Price brings real estate sales, lead follow-up, and AI workflow experience to the classroom.
- We will focus on messages, notes, follow-up, listing prep, appointment prep, and daily productivity.
- The class is taught as a live workshop: short concepts, real estate examples, and hands-on practice.
- Questions are welcome throughout, especially when a workflow needs to fit your brokerage or market.

Workshop point

Connect the idea to a real client, lead, listing, or daily workflow.

About the Instructor

Instructor

Ian Burton Price

REALTOR® | Dalton Wade Real Estate Group
V.P. of Growth and Partnerships | GoHouse.ai

Ian works at the intersection of real estate, AI, lead follow-up, and practical business systems. His focus is helping real estate professionals use technology responsibly to improve communication, prioritize follow-up, prepare for client conversations, and build more consistent daily workflows.

Teaching Focus:

Practical, vendor-neutral AI workflows agents can understand, review, and apply without replacing their professional judgment.

GoHouse.ai is part of Ian's professional background. No GoHouse.ai product is required for this course.

By the end, AI should feel useful in your normal sales day

- Draft clearer emails, texts, listing copy, and client updates.
- Personalize buyer and seller communication using better context.
- Prepare for appointments, objections, and follow-up conversations.
- Build one simple daily AI workflow for productivity and consistency.
- Recognize basic risks involving accuracy, privacy, Fair Housing, and overreliance.

Use it where work repeats

Start with messages, notes, follow-up, and prep before chasing new tools.

The two-hour path

120 minutes: concept -> example -> practice -> takeaway

Prompt practice / wrap-up

SECTION 1

AI Reality Check

AI is useful when it supports work agents already do.

01

AI matters because speed and consistency shape client experience

- Consumers expect quick, clear responses across text, email, phone, and web inquiries.
- Most agents have more follow-up tasks than hours in the day.
- AI reduces blank-page time for common communication and prep tasks.
- The advantage is not one impressive prompt. It is using AI repeatably on work that already happens.

Speed plus judgment

AI can reduce blank-page time; the agent still owns accuracy and relationship quality.

Move from random prompts to repeatable business assistance

Random AI use

- One-off prompts
- Generic output
- No saved process

Repeatable workflow

- Known use case
- Context-rich prompt
- Reviewed reusable output

Where would 20 saved minutes matter most this week?

DISCUSS

Pick one task you delay because it is repetitive, awkward, or annoying.

Workshop canvas

- Seller update after low activity
- Follow-up after a showing
- Open house recap
- CRM note cleanup
- Social caption from listing facts

4-6 min

A plain-English way to think about AI

Good at

- Drafting
- Rewriting
- Summarizing
- Brainstorming
- Organizing
- Role-play

Not safe for

- Guaranteeing facts
- Legal advice
- Local market certainty
- MLS rule interpretation
- Fair Housing judgment
- Final decisions

Before you use an AI tool

- Check brokerage policy before using client or transaction information
- Avoid pasting private client details into public AI tools
- Use verified property, MLS, and market data
- Review every message before sending
- Keep AI as a drafting assistant, not the final authority

**Private, verified,
compliant, reviewed**

Treat public AI tools carefully and
review every output before use.

Four questions before using AI output with a client

Is it true?

Verify property facts, stats, dates, and claims.

Is it allowed?

Check brokerage, MLS, advertising, and communication rules.

Is it fair?

Avoid protected-class language, steering, or discriminatory targeting.

Is it yours?

Edit for your voice, judgment, and client relationship.

Practice: Spot the Risk

PRACTICE

Review this AI-generated sentence:

This quiet family neighborhood is perfect for young professionals and has the best schools in the area.

Workshop canvas

- What could create risk?
- What facts need verification?
- How could it be rewritten safely?

4-6 min

The fix is better instructions, not just better wording

Better prompts reduce risk by giving AI facts, tone, boundaries, and review rules.

Before

Write a listing description for a nice house in Coral Gables.

After

Using only the verified facts below, draft a warm 130-word listing description. Avoid Fair Housing risk, school claims, or invented features. Facts: 3 bedrooms, 2 baths, updated kitchen, covered patio, 2-car garage, near parks and dining.

Client Communication

Better context creates messages that sound more like a professional agent.

Use the real estate prompt formula

Role

You are helping me as a real estate professional

Task

Draft a text / email / script / checklist

Context

Client situation, property, timeline, concern

Tone

Warm, concise, direct, educational

Constraints

Avoid claims, private data, Fair Housing risk

Goal

Reply, next step, clarity, appointment

Formula in action: client follow-up prompt

Before

Write a follow-up text for a buyer.

After

You are helping me as a real estate professional.
Draft a warm, concise text for a buyer who toured two condos, liked one, but is worried about monthly payment. Avoid financial advice or promises. Ask one clear next-step question.

Apply the formula to a real client communication moment

Now apply the formula to a real client communication moment.

A buyer toured two condos, liked one, but is worried about monthly payment.

Client context

I know the monthly payment is the big question. I can send a quick side-by-side with estimated HOA, taxes, and payment ranges so you can compare without guessing. Would that be helpful before we decide whether to see similar options?

Agent-reviewed response

Seller update: honest without sounding negative

A listing had showings but no offers this week.

Client context

We had three showings this week and the consistent feedback was positive on condition, with some hesitation around pricing compared with recent nearby options. My recommendation is that we review the newest activity together and decide whether a small adjustment would improve our position.

Agent-reviewed response

Improve this follow-up message

PRACTICE

Original message:

Just checking in to see if you are still interested.

Workshop canvas

- Give the lead a reason to reply
- Ask one specific question
- Keep it under 45 words

4-6 min

Reusable communication prompts: Part 1

1

Rewrite this text so it sounds warm, concise, and natural for a REALTOR: [draft]

2

Create a buyer follow-up email based on these call notes: [notes]. Ask one clear next-step question.

3

Draft a seller update after a quiet week. Be honest, professional, and solution-oriented.

Reusable communication prompts: Part 2

1 Create three versions of this follow-up: text, email, and voicemail.

2 Review this message for accuracy, Fair Housing risk, and claims I should verify.

3 Give me three tone options: concise, reassuring, and more direct.

Lead Follow-Up

Context before cadence: different lead sources need different first responses.

Most follow-up fails because it is generic, late, or stops too soon

- Many leads arrive with limited context, whether they come from portals, IDX, open houses, referrals, social media, sign calls, or past database activity.
- Speed matters, but fast and generic still feels automated.
- Different lead sources need different first responses because the relationship context is different.
- Useful follow-up gives the person a reason to continue the conversation.

Useful beats frequent

Better follow-up gives the lead a reason to respond and a clear next step.

CRM templates are static. AI-assisted drafts adapt to context.

CRM template

- Saved message
- Same wording
- Fast but generic

AI-assisted draft

- Source + context
- Situation-aware wording
- Agent-reviewed before sending

Lead note to next-best message

Property inquiry response that does more than answer "available?"

Lead asked: "Is the condo on Brickell still available?"

Client context

Weak: "Yes, it is available. Let me know if you want to see it."

Better: "I can verify the latest status for you. Are you focused only on Brickell, or would similar buildings with strong amenities also be worth sending over?"

Agent-reviewed response

Build a first-response set

PRACTICE

Sample lead: A buyer asks about a 2-bedroom condo and leaves no timeline.

CRM templates repeat a saved message. AI helps adapt the message to the situation, then you review it before sending.

Workshop canvas

- Draft a text message
- Draft a short email
- Draft a voicemail opener
- Add one appointment-oriented next step

4-6 min

Track whether AI is improving follow-up quality

Response rate

Are more leads replying?

Contact rate

Are conversations starting?

Appointment rate

Are replies becoming meetings?

Appointments / 100 leads

Is the source becoming more useful?

Listings and Marketing

Facts first. Polish second. Human review always.

Start with verified facts and instruct AI not to invent missing details

- Property features and improvements
- Showing feedback and buyer questions
- Seller goals and timing
- Factual neighborhood context
- Desired tone and format

Facts first

Use verified facts and tell AI not to invent missing details.

From bullet points to polished marketing copy

Better copy adds warmth without inventing facts.

Before

3 bedrooms / 2 bathrooms
Updated kitchen
Covered patio
2-car garage
Nearby dining, parks, and everyday amenities

After

This 3-bedroom, 2-bath home pairs practical everyday function with inviting outdoor space. Highlights include an updated kitchen, covered patio, and 2-car garage, with convenient access to nearby dining, parks, and everyday amenities. The description stays focused on verified features while giving the listing a clearer, more polished presentation.

One clean fact block can create consistent marketing assets

Source facts
Verified details kept in the chat

Listing copy
Polished narrative

Open house invite
Short event copy

Social post
Caption + hook

Video script
30-second talking points

Seller update
Activity summary

Practice: Turn one fact set into three assets

PRACTICE

Use only verified facts. Do not invent features.

Now try the same process with three high-use formats.

Workshop canvas

- One listing paragraph
- One 35-word social caption
- One open house invite

4-6 min

AI helps you rehearse, organize, and simplify

- Build buyer consultation and listing appointment agendas.
- Create discovery questions from client context.
- Practice common objections before the live conversation.
- Explain market conditions in plain language, with verified facts.
- Prepare follow-up after the appointment.

Practice before pressure

Role-play makes client conversations clearer and less reactive.

Seller wants to overprice

"Role-play as a seller who believes their home is worth more than recent comparable sales. Push back realistically. After each of my responses, tell me what was clear, what sounded defensive, and what I should try next."

Role-play prompt

Buyer wants to wait for rates to drop

"Use AI to practice the conversation without making predictions or giving financial advice. Prompt: Act as a cautious buyer who wants to wait for rates to drop. Help me respond in a way that is educational, not pushy. Challenge any claims that sound too certain."

Role-play prompt

Create an appointment prep brief

PRACTICE

Choose buyer consultation or listing appointment.

Workshop canvas

- Draft a 5-part agenda
- Add 5 discovery questions
- Add 3 likely objections
- Draft a follow-up email template

4-6 min

Daily Workflow and Guardrails

Attach AI to the day, not to a vague intention.

A simple daily AI workflow

Responsible AI use in a real estate business

- Protect private client information.
- Do not paste confidential data without authorization and safeguards.
- Review all output before use.
- Follow brokerage policies, MLS rules, and advertising requirements.
- Avoid discriminatory targeting or language.
- Use AI to support professional judgment, not replace it.

Review before use

Private data, brokerage policy, MLS rules, advertising, and Fair Housing still apply.

When in doubt, slow down and verify

Private data

Remove names, contact info, financial details, and sensitive context before using public tools.

Advertising

Review claims, disclosures, brokerage rules, and platform requirements.

MLS

Follow MLS rules for listing data, remarks, photos, and public display.

Consumer communication

Keep records, respect opt-outs, and do not automate beyond policy.

Build your daily AI workflow

PRACTICE

Pick one task in each part of the day.

Workshop canvas

- Morning task
- Midday follow-up task
- Afternoon marketing/client update task
- End-of-day CRM or notes task

4-6 min

Five prompts to save before you leave

1

Draft a client message from these notes: [notes]. Make it concise, warm, and specific.

2

Create three versions of this follow-up: text, email, and voicemail.

3

Review this message for accuracy, Fair Housing risk, and claims I should verify.

4

Turn these verified listing facts into a listing paragraph, social caption, and open house invite.

5

Role-play as [buyer/seller type] and help me practice responding professionally.

Make the workflow repeatable

Your one-week implementation plan
